

Bank Marketing Campaign Analysis

Exploratory Data Analysis Report

1. Project Objective

Analyze customer and campaign data to identify patterns associated with term deposit subscriptions.

2. Dataset Overview

Metric	Value
Total records	41,188
Total columns	22
Subscribed (yes)	4,640
Not subscribed (no)	36,548
Subscription rate	11.27%

3. Analysis Performed

- Dataset structure and descriptive statistics
- Subscription distribution
- Subscription rates by job and age group
- Subscription rates by contact method and previous outcome
- Campaign frequency and monthly subscription rates
- Numerical correlation analysis
- Missing values, unknown categories, and duplicate checks

4. Interpretation and Limitations

The results describe associations in the observed data and do not establish causation. The duration variable measures the length of the last call and should not be used to select customers before a call.

5. Conclusion

This exploratory analysis summarizes customer subscription patterns and campaign characteristics. Further evaluation is needed before using these findings to guide future campaigns.
